RE: inquiry regarding Complaint Register Investigation 1049917

Dear Sergeant Solis:

At your request, I reviewed medical records, a list of prescription drugs, over the counter drugs, personal care products and dietary supplements in order to determine if ingestion or skin application of any or all of these items could cause a positive drug test result for cocaine in a sample of the donor's hair.

Based on my professional training, knowledge and experience as a certified Medical Review Officer in good standing, I have determined that use of the drugs, personal care products and supplements on the list could not cause a positive test result for cocaine in a hair specimen.
